# **Genuine Australian Leather Cricket Balls**

**With new Impregnated finish Technology!!!**

Get ready for great sporting action, as **Race Sporting Goods introduces its "Race Leather Cricket Ball"** range for 2008 / 2009. The ultimate adrenaline rushing cricket ball that has been designed to take cricket to the next level.

## **Top Quality Leather**

Race Leather Cricket Balls are manufactured using Top Grade Special Australian Alum Tanned Leather, which provides excellent "Abrasion" resistance to the balls.

## **Categories and Colour**

Race Cricket balls are available in 2 / 4 pce. (156gms) Red, Yellow and White colours. Our White balls are especially finished with a bright white shiny coating, which provides excellent player visibility during Day/Night matches. By using the latest technologies available, these White cricket balls also retain their colour longer than their competitors, equivalent balls.

## **Shiny Impregnated Buff Finish**

Race Cricket balls do not use a wax finish (animal fat based). Instead, we use a specialized four compound, that is sprayed onto the ball, followed by an intense "Buffing" process to maintain the impregnated long lasting finish.

## **Nylon Reinforcement to stop Ball Dis-Figuration**

A special moulding technology is used so that the balls never becomes dis-figured, when played under normal conditions. As a result the ball has a success rate of 50+ overs, with shape retention.

## **Machine Stitched Seam for Better Grip**

The outer side core seam (stitching) is produced by using heavy duty stitching machines, with premium quality 9 ply nylon thread that has been coated with special finish to provide a better hold on the ball.

## **Portugese Cork Centre... "Innercore"**

The centre core of Race cricket balls is made from "Solid High Quality Portugese Cork", blended with top grade rubber granules. This is very conducive to swing bowling!

## **Centre Stitching & Ring Test**

The centre of all Race cricket ball, are manually stitched with a 9-ply strength cotton based thread. The stitches vary from 65-72 per ball, depending on the thickness of the leather. Each ball is also passed through the "Ring Test" to ensure the ball size is between the international limits of 71-72 mm in diameter.
